The Historical Context of Australian Currency

Pre-Decimal Currency System in Australia

Before decimal currency was adopted, Australia used the British monetary system, which was based on pounds (£), shillings (s), and pence (d). This system had been inherited from Britain and was widely used across the British Empire, including Australia, since the early colonial period. - Structure of the pre-decimal system: - 1 pound = 20 shillings - 1 shilling = 12 pence - Therefore, 1 pound = 240 pence This complex system made calculations and transactions increasingly cumbersome, especially as the economy grew and commerce expanded.

Challenges of the Old System

As Australia's economy developed through the early 20th century, several issues with the old system became apparent: - Complex calculations: The non-decimal nature made mental math and accounting more complex. - Limited technological support: Cash registers, vending machines, and other machinery had difficulty adapting to the intricate subdivisions. -

International trade complications: The British system was increasingly incompatible with the decimalized currencies of other countries, hindering trade. These factors created a compelling case for currency reform, leading to the eventual move towards decimalization.
