Understanding Derivatives Markets

What Are Derivatives?

Derivatives are financial contracts whose value is derived from the performance of underlying assets such as stocks, bonds, commodities, currencies, or market indexes. They serve various purposes, including hedging risk, speculation, and arbitrage. Common types of

derivatives include futures, options, swaps, and forward contracts.

Types of Derivatives

1. **Futures Contracts:** Standardized agreements to buy or sell an asset at a predetermined price on a future date.
2. **Options:** Contracts granting the right, but not the obligation, to buy or sell an asset at a specified price within a certain timeframe.
3. **Swaps:** Contracts to exchange cash flows or other financial instruments, often used for interest rate or currency risk management.
4. **Forwards:** Customized agreements similar to futures but traded over-the-counter (OTC), allowing tailored terms.

The Structure of Derivatives Markets

Primary Market vs. Secondary Market

Derivatives can be traded in two main markets: - Primary Market: Where new derivative contracts are created and issued. - Secondary Market: Where existing derivatives are bought and sold among investors, providing liquidity and price discovery.

Exchange-Traded vs. Over-the-Counter (OTC) Derivatives

- Exchange-Traded Derivatives: Standardized contracts traded on organized exchanges like the Chicago Mercantile Exchange (CME). They offer transparency and reduced counterparty risk. - OTC Derivatives: Customized contracts negotiated directly between parties, often used for complex or tailored hedging strategies. They carry higher counterparty risk but provide flexibility.
