Common Python Interview Questions on Mettl

The following sections highlight typical questions asked during Mettl assessments, categorized based on difficulty and topic.

Basic Python Questions

1. **What are Python's key features?** - Easy to read and write

- Interpreted language - Dynamically typed - Supports multiple paradigms (procedural, object-oriented, functional) - Extensive standard libraries 2. **Explain Python data types with examples.** - Numeric types: `int`, `float`, `complex` - Sequence types: `list`, `tuple`, `range` - Text type: `str` - Mapping type: `dict` - Set types: `set`, `frozenset` - Boolean: `bool` 3. **How does Python handle memory management?** - Python uses an automatic garbage collector for memory management. - Memory is allocated dynamically for objects and deallocated when no longer in use. 4. **What are Python functions? How are they defined?** - Functions are blocks of reusable code. - Defined using the `def` keyword: def greet(name): return f"Hello, {name}"

Intermediate Python Questions

1. **Explain list comprehensions with examples.** - Concise way to create lists: squares = [x2 for x in range(10)] - Enhances code readability and efficiency. 2. **What is the difference between `deepcopy` and `copy`?** - `copy()` creates a shallow copy; nested objects are references. - `deepcopy()` creates a new object and recursively copies nested objects. 3. **Describe Python's exception handling mechanism.** - Uses `try`, `except`, `else`, and `finally` blocks. - Example: try: result = 10 / 0 except ZeroDivisionError: print("Cannot divide by zero") 4. **What are Python decorators?** - Functions that modify the behavior of other functions. - Syntax: def decorator(func): def

wrapper(): print("Before function call") func() print("After function call") return wrapper

Advanced Python Questions

1. **Explain Python generators and their advantages.** - Generators produce items lazily, saving memory. - Created using `yield`: def count_up_to(n): count = 1 while count <= n: yield count count += 1 2. **Discuss Python's GIL (Global Interpreter Lock) and its impact on concurrency.** - GIL allows only one thread to execute Python bytecode at a time. - Limits true parallelism in multi-threaded programs, affecting CPU-bound tasks. - Multi-processing can be used to achieve parallelism. 3. **What are metaclasses in Python? Provide a use case.** - Metaclasses define how classes behave. - Used for class customization, validation, or automatic method addition. - Example: class Meta(type): def __new__(cls, name, bases, dct): dct['created_by'] = 'MetaClass' return super().__new__(cls, name, bases, dct) class MyClass(metaclass=Meta): pass 4. **Describe the concept of Python's context managers and the `with` statement.** - Context managers handle setup and teardown actions. - The `with` statement simplifies resource management: with open('file.txt', 'r') as file: data = file.read()
